AUC = cross-validated (5-fold, out-of-fold) AUC of a gradient-boosted surrogate,
signal mass points weighted equally; min = worst single mass point vs background.
dCor / rho = dependence between the NN1 and NN2 surrogate scores on background (0 = independent).
Barrel-only vs inclusive: compare P1 trained=barrel with P3 trained=inclusive, eval=barrel.
The surrogate nominates; it does not crown. Final placement is GAMBIT's (closure and G).

changes:
  inclusive: one net per role trained on BOTH regions with a region flag input;
  features = union of P1 endcap and P1 barrel (region-tagged columns are missing outside
  their region; the surrogate handles missing values natively). Scored per region.
```
